Brand & UX style guide

The complete visual and voice system for Mari (mari.guru) — colors, type, shape language, iconography, and component rules, sourced from the live marketing site and product console.

Color tokens

One espelette accent per canvas. Biscay for brand weight, biscay-2 for interaction. Status tones are semantic, not decorative.

Light (default)

`rgb(var(--c-*))`

Paper #FFFFFF Page / app background	#10263B Text, hairline borders, mark	Flysch #F0F2F5 Panel fill, hover state
Biscay #1C3F60 Headings, primary buttons	Biscay-2 #1E6FA8 Links, hover, focus ring	Espelette #B23A1E The single hot accent
Moss #2C6E49 Status: ok / healthy	Clay #A05E1C Status: attention	

Dark (night-plan)

`inverts, never black`

#0E2032	Ink #EAF0F5	Biscay #6FB1E6
Espelette #E8805E		

Status badges

`semantic scale`

● OK / APPROVED	● ATTENTION / PENDING	● BLOCKED / FLAGGED	● INFO	● NEUTRAL / DRAFT
-----------------	-----------------------	---------------------	--------	-------------------

Type system

Inter for display and body. JetBrains Mono for chrome — labels, badges, table headers, code. No serif, ever.

H1 • 800

Claim-checking for AI coding agents

H2 • 800

Your agent wrote the README

H3 • 700

Docs with receipts

BODY • 400

Mari checks your agent's claims against the code — on-device, no API key, no drama.

App vs. marketing scale

ROLE	MARKETING	APP / CONSOLE
Page heading	clamp(2.25–4rem), 800	22px, 700
Card / section title	18–20px, 700	15px, 600
Body	16–18px, 400	13–14px, 400–500
Chrome / labels	10.5–11px, JetBrains Mono, uppercase, 0.08–0.18em tracking	

Two deliberate modes

The brand identity and the app console use different shape rules on purpose. Both are correct — pick the one matching where you're building.

BRAND MODE

Marketing site, landing pages, social assets

Radius 0px. Hard offset block shadow, 4px 4px 0 ink. Buttons press into the page on click.

Get started

APP / CONSOLE MODE

Product UI, dashboards, dense data screens

Radius 4–6px. No shadows anywhere. Separation comes from hairline ink/15 borders only.

Get started

Dot-matrix texture

22px grid, wash only

RADIAL-GRAIDENT(INK 0.07-0.14, TRANSPARENT) / 22PX 22PX

Never a solid fill. Never on small/dense UI (buttons, chips, rows). Large surfaces only: page background, hero sections, empty states.

Spacing scale

4px base

Do / don't

Iconography is lucide-react only. Voice is plainspoken, genuine, dry wit, no mascot. Full voice guide: [mari/web/web/STYLE.md](#).

DO	DON'T
One espelette accent per screen	Espelette as a repeated decorative color
Inter + JetBrains Mono only	Any serif, any third typeface
Hairline ink borders for separation	Soft drop shadows in app/console UI
lucide-react icons	Hand-drawn, plant, or "sketch filter" icons
Sharp corners (0 brand / 4–6px app)	Large rounded corners, pill-shaped cards
Dot-matrix as a faint background wash	Dot-matrix as a solid fill or on small UI
Semantic 5-tone status scale	Ad-hoc new colors for "just this one badge"
Active voice, sentence case, serial comma	Title Case headings, passive voice, hype

■ FOR LLM AGENTS
